- 2011 Xth
English

WORK EXPERIENCE

- Nov 2024 - Present Fullstack Developer
voyager partners
Working as a Freelance Consultant on amodernization project in Healthcare industry. Modernization of existing apps, updating dependencies and fixing veracode issues. Working With Java, nodejs and Reactjs based apps using typescript Deployment using Github CICD tools and Kubernetes with gcloud and azure.
- Mar 2023 - Oct 2024 Senior Software Engineer
Infosys
I have worked with a US Banking client to modernize their existing application. I work mainly on the frontend part, where we do have different applications for User interface. I have built UI components from scratch using Reactjs-based frameworks and libraries. I also have been a part of designing the interfaces from the old design references. I also sometimes work with Java applications to configure some libraries and secrets for making the application work on PCF cloud and across different environments from development to production. I have also written unit tests for the application and was able to achieve a nice code coverage. Also helped team mates with problems on the UI side as well backend side, mainly UI side as per the assignment of me to the project mainly on frontend related applications. Worked with sonar for vulnerability and fixes during testing.

Nov 2021 - Mar 2023

Open Source Developer
Freelancer

Working on Open Source Apps on decentralized platforms like Blurt, Serey where people do blog and share their content on Crypto Powered Blogging platform. Working on the frontend with ReactJS, NextJS to build UI Components and CSS/HTML for design. Deployments with Docker Apps and PR review.

May 2018 - May 2022

Lead Software Engineer
TTM Technologies

Worked on Staffbox and Kidafter school application built with Jhipster, one monolith and another micro services. We used to work on spring boot/java/angular/NodeJs/python. I was a lead in the position managing team of 4-5 peoples and also interviewing for a few candidates for our product Staffbox staffing as a service. Worked on multiple stages as per requirement from backend to frontend. Integration of file storage services from digital ocean/AWS, sowe to text, text analysis services and other APIs integration from AWS. Also worked on NodeJs apps using Faceapi js for application using face detection

Nov 2017 - Mar 2019

Product Engineer
Simbalabs

Worked on creating monolith and micro services with Jhipster using spring boot and angular. Deployment with docker, managing multiple technology projects like NodeJs, Python. Working as a full stack and Devops engineer. Researching on various app generators by Yeoman, yarn and infrastructure code applications like ansible, jenkins, nginx.

Jun 2017 - Jul 2017

Product Engineer
HARTRON

Web application development for government services of haryana. Mockup UI and design work. Angular/css/html for web app creatiion and git for code management

Projects

464 Days

Banking Modernization

Working on modernization of existing project built with JSP to React based frontend with Java APIS. Worked on building interface, components and screens from scratch. Integrated rest apis with Redux and UI components. Written unit test cases for testing components and redux services with React Testing Framework. Hosting and reviewing project on Git.

615 Days

Graphene Curation Reporter tool

A React app to generate reports by applying various filters from the blockchain of an account. This application is an open-source project developed to help the community. I have used Next.js framework of React as well as some Node.js code. For theming used Chakra components for Next.js

212 Days

Kidafter School

A full Stack application Built with Angular and Spring Boot

including other technologies like AWS/docker/zoom APIs and more. To enable students and teachers to sign up for a 1:1 sessions and scheduling zoom calls. This was a US client for which we worked.

244 Days

Face Recognition System

Built a face recognition app for a client. The project was built using Nest.js framework of Node.js as the backend with mongo as the database. For frontend it used Angular and material design. The app scans images and stores them that can be later identified by scanning a person to verify identity of a person.

1461 Days

Staffbox

It was our own product for HR needs. A box full of hiring tools. It was to help companies hire the best by doing a screening process to list out fake resumes as well hiring only the best quality people with less costs than competition in the market.

334 Days

Training and Placement Cell Portal in College

Worked on Placement Portal for showing hiring related data to companies and recording students data. Built with wordpress

13 Months

Urvara APM

While working at simbalabs, we as a team of 3 and I as lead engineer in startup developed a web app built using JHipster with angular/spring boot. The tool had business logic for managing workers and tools related to farming corporation. I worked on adding UI components, rest APIs and design work. Also reviewed code on git and managed deployments using Jenkins.

12 Months

Medcopay modernization

Working on modernization existing medcopay project for a health care client using NodeJs for API and ReactJS for frontend development. Using veracode and GitHub security for fixes and CICD for Kubernetes using azure. Code reviews and support
